Professional Summary

AWS Certified Cloud Practitioner with production AWS and network/edge support experience, transitioning into hands-on cloud infrastructure engineering. Currently building Infrastructure-as-Code projects on AWS (Terraform: VPC, EC2, IAM) and maintaining a self-hosted CI/CD deployment pipeline (Docker, GitHub Actions, Linux). Strong troubleshooting background across AWS cost management and network/edge infrastructure, with a documentation-driven, proactive approach to learning new systems.

Certifications

AWS Certified Cloud Practitioner

Technical Skills

Cloud (AWS): EC2, VPC, S3, IAM, Cost Explorer, Savings Plans

Infrastructure as Code: Terraform (hands-on, active project work)

Linux / Systems: Ubuntu Server administration, systemd, journalctl, file permissions, user/group management

Tools: Docker, Git, GitHub Actions (CI/CD), AWS CLI

Networking / Troubleshooting: DNS, TLS/SSL, traceroute, MTR

Professional Experience

Technical Support Engineer — Cloudflare (Remote)
Lisbon, Portugal | Sep 2025 – Present

- Reproduce and diagnose customer-reported issues directly against Cloudflare's edge network using dig, curl, MTR, OpenSSL, and traceroute before responding
- Isolate root causes of complex delivery issues, such as zstd re-compression behavior affecting pre-compressed assets
- Apply Linux and DNS troubleshooting skills daily in a high-volume, enterprise support environment

AWS Technical Support Specialist — Amazon Web Services (Remote)
Dublin, Ireland | Jan 2022 – Sep 2025

- Provided hands-on billing, invoicing, and cost-optimization support for enterprise AWS accounts
- Analyzed customer usage data using AWS Cost Explorer to identify savings opportunities and advise on Savings Plan purchases
- Supported AWS Identity and Access Management (IAM) issues for customer accounts
- Directed customers to official AWS documentation for other service-specific technical issues, escalating to specialized support teams when needed

Personal Projects

AWS Cloud Infrastructure with Terraform (in progress)

- Building a VPC with public/private subnets, an EC2 instance reachable only via AWS Systems Manager Session Manager (no open SSH), and an S3 backup bucket, fully defined as Terraform code
- Applying least-privilege IAM policies throughout, with written justification for each permission granted
- Writing a teardown runbook covering production-safety considerations beyond a plain terraform destroy

Self-Hosted CI/CD Deployment Pipeline — github.com/andygrun/home-server-lab

- Containerized a personal website using a custom nginx Docker image
- Built a GitHub Actions CI/CD pipeline with a self-hosted runner (configured as a systemd service) to automate deployment to a home Ubuntu server
- Practicing daily hands-on Linux fundamentals (journalctl, systemctl, permissions, networking, package management) as ongoing skill-building
